

ARBAZ SAYYAD

Software Engineer - Backend | Java | Spring Boot | Kafka | Microservices

+91 9834239709 | Pune, India | [✉ arbazsayyad.dev@gmail.com](mailto:arbazsayyad.dev@gmail.com) | [in/arbaz-sayyad](https://in.linkedin.com/in/arbaz-sayyad) | [/Arbaz4Sayyad](https://github.com/Arbaz4Sayyad) | [Portfolio](#)

PROFESSIONAL SUMMARY

Backend Software Engineer with nearly **3 years of experience** building scalable, cloud-native microservices and distributed systems using **Java, Spring Boot, Apache Kafka, Redis**, and **relational databases**. Experienced in designing REST APIs, event-driven architectures, secure backend services, and performance optimizations for high-throughput applications. Contributed to **Spring Kafka** and **Spring Framework** through open-source PRs and solved **400+ Data Structures and Algorithms problems** on LeetCode and HackerRank.

TECHNICAL SKILLS

Programming Languages: Java (17/21), JavaScript

Backend: Spring Boot, Microservices, Spring MVC, Spring Cloud, Spring WebFlux, Spring Security, Hibernate/JPA, REST APIs, gRPC

Distributed Systems & Messaging: Apache Kafka, Event-Driven Architecture, DLQ, Retry Mechanisms, Resilience4j, Fault Tolerance

Databases & Caching: PostgreSQL, MySQL, MongoDB, Redis

Cloud & DevOps: AWS (EC2, S3, RDS), Docker, Kubernetes, Jenkins, CI/CD, Maven

Observability & Security: Prometheus, Grafana, ELK Stack, OAuth2, JWT, RBAC

Engineering Practices: Data Structures & Algorithms, Low-Level Design, System Design, TDD, Agile/Scrum, Code Reviews, Git

PROFESSIONAL EXPERIENCE

Software Engineer – Backend

Oct 2023 – Present

Bravezone Cloudware (Client: Cognizant)

Pune, India

- Developed backend microservices for an IoT-based Smart Building Management System using **Java, Spring Boot**, and **PostgreSQL/MySQL**, processing real-time sensor data for lighting, temperature, and occupancy monitoring.
- Implemented inter-service communication using **RestTemplate**, **WebClient**, and **OpenFeign**, configured **Spring Cloud Gateway** for routing, and integrated **Resilience4j** for **circuit breaking**, **fallbacks**, and **rate limiting** across distributed services.
- Built **Kafka-based event-driven asynchronous workflows** with retry mechanisms and DLQ handling, reducing manual failure recovery efforts by approximately **60%**.
- Improved application performance by **30%** and reduced average query execution time by **45%** through SQL query optimization, indexing, and **N+1 query resolution** in JPA.
- Implemented **Redis** caching for frequently accessed data, reducing database reads and improving API response times by nearly **35%**.
- Secured REST APIs using **Spring Security**, **OAuth2**, **JWT**, and **RBAC**, enforcing role-based access across backend services.

OPEN SOURCE CONTRIBUTIONS

Spring Kafka | Java, Apache Kafka, Distributed Systems

[PR #4397](#)

- Contributed fail-fast validation support for **@RetryableTopic** in Spring Kafka to catch consumer configuration issues earlier, preventing runtime failures and improving developer experience for framework users.

Spring Framework | Java, WebFlux, Spring MVC

[PR #36697](#)

- Extended **ModelAttributeMethodArgumentResolver** to support custom validation in **Spring WebFlux**, improving framework extensibility and aligning reactive validation behaviour with established Spring MVC patterns.

PROJECTS

Claims Eligibility & Processing System | Java, Spring Boot, PostgreSQL, Kafka, Redis, Docker, Kubernetes

[Live](#) | [GitHub](#)

- Architected a distributed claims platform with **10+ Spring Boot microservices** behind **Spring Cloud Gateway**, enabling independently deployable claim intake, eligibility, and approval services.
- Engineered an asynchronous claims pipeline using **Apache Kafka**, eliminating synchronous HTTP bottlenecks and improving end-to-end processing throughput by **40%**.
- Secured service access using **OAuth2** and **RBAC**, enforcing role-based authorization for citizens, caseworkers, and administrators.

AI Meeting Notes | Java, Spring Boot, React, PostgreSQL, Gemini API (2.5 Flash), Docker

[Live](#) | [GitHub](#) | [Demo](#)

- Architected an asynchronous **AI meeting platform** using **Spring Boot 3** and **React 19**, decoupling audio ingestion from transcription and reducing upload response time from **45s to 250ms**.
- Replaced polling with **STOMP over WebSockets** for real-time processing updates, reducing redundant HTTP requests by **80%**.
- Integrated **Google Gemini 2.5 Flash** via reactive **WebClient** with structured JSON prompting to automatically extract **summaries, decisions, and action items** from transcripts.

CollabMatrix - Collaboration Platform | Spring Boot, Kafka, Redis, WebSockets, MongoDB

[Live](#) | [GitHub](#) | [Demo](#)

- Built a real-time collaboration platform supporting concurrent document editing, task management, and chat using **WebSockets** for real-time synchronization.
- Implemented **Optimistic Locking** for safe concurrent task updates and **Rate Limiting** to protect backend services from overload.
- Deployed **9 services** using **Docker**, with **Prometheus** and **Grafana** monitoring, and secured authentication using **JWT**.

EDUCATION

Master of Computer Application (MCA) | CGPA: 8.25 / 10

Zeal Institute of Business Administration, Computer Application & Research

Aug 2022 – May 2024

Pune, India
