

ARBAZ SAYYAD

Backend Software Engineer | Java | Spring Boot | Microservices | Distributed Systems

+91 9834239709 | Pune, India | ✉ arbazzsayyad.dev@gmail.com | [in/arbaz-sayyad](https://www.linkedin.com/in/arbaz-sayyad) | [/Arbaz4Sayyad](https://github.com/Arbaz4Sayyad) | [Portfolio](#)

PROFESSIONAL SUMMARY

Backend Software Engineer with around **3 years of experience** building scalable, cloud-native microservices and distributed systems using **Java, Spring Boot, Kafka**, and **Redis**. Experienced in designing event-driven architectures, developing secure REST APIs, and optimizing performance for high-throughput backend services. Open-source contributor to **Spring Kafka** and **Spring Framework**, with a strong foundation in backend engineering, system design, and algorithms, having solved **400+ DSA problems** on LeetCode and HackerRank.

TECHNICAL SKILLS

Programming Languages: Java (17/21), JavaScript

Backend: Spring Boot, Microservices, Spring MVC, Spring Cloud, Spring WebFlux, Spring Security, Hibernate/JPA, REST APIs, gRPC

Distributed Systems & Messaging: Apache Kafka, Event-Driven Architecture, DLQ, Retry Mechanisms, Resilience4j, Fault Tolerance

Databases & Caching: PostgreSQL, MySQL, MongoDB, Redis

Cloud & DevOps: AWS (EC2, S3, RDS), Docker, Kubernetes, Jenkins, CI/CD, Maven

Observability & Security: Prometheus, Grafana, ELK Stack, OAuth2, JWT, RBAC

Engineering Practices: Data Structures & Algorithms, Low-Level Design, System Design, TDD, Agile/Scrum, Code Reviews, Git

PROFESSIONAL EXPERIENCE

Software Engineer – Backend

Oct 2023 – Present

Bravezone Cloudware (Client: Cognizant)

Pune, India

- Designed and implemented backend services using **Java, Spring Boot**, and **PostgreSQL/MySQL** for business-critical workflows across multiple microservices.
- Built asynchronous event-driven workflows using **Apache Kafka**, implementing retry mechanisms and **DLQ** handling that reduced manual failure recovery efforts by approximately **60%**.
- Introduced **Redis** caching for frequently accessed data, reducing database reads and improving API response times by nearly **35%**.
- Optimized database performance through composite indexing, query tuning, and resolving **N+1 query issues** in **JPA**, reducing average query execution time by **45%**.
- Developed secure REST APIs using **Spring Security, JWT Authentication, OAuth2**, and **RBAC** to enforce controlled access.
- Developed unit/integration tests using **JUnit** and **Mockito** for critical business workflows, achieving over **80% test coverage** while contributing to code reviews, debugging, and production issue resolution.

OPEN SOURCE CONTRIBUTIONS

Spring Kafka | Java, Apache Kafka, Distributed Systems

[PR #4397](#)

- Contributed fail-fast validation support for **@RetryableTopic** in Spring Kafka to catch consumer configuration issues earlier, preventing runtime failures and improving developer experience for framework users.

Spring Framework | Java, WebFlux, Spring MVC

[PR #36697](#)

- Extended **ModelAttributeMethodArgumentResolver** to support custom validation in **Spring WebFlux**, improving framework extensibility and aligning reactive validation behaviour with established Spring MVC patterns.

PROJECTS

AI Meeting Notes | Java, Spring Boot, React, PostgreSQL, Gemini API (2.5 Flash), Docker

[Live](#) | [GitHub](#) | [Demo](#)

- Architected an asynchronous **AI meeting platform** with Spring Boot 3 and React 19, decoupling audio ingestion from transcription to cut upload response time from **45s to 250ms**.
- Integrated **Google Gemini 2.5 Flash** via reactive WebClient with structured JSON prompting to auto-extract **summaries, decisions, and action items** from transcripts.
- Replaced polling with **STOMP over WebSockets** for real-time processing updates, cutting redundant HTTP requests by **80%**.

Claims Eligibility & Processing System | Java, Spring Boot, PostgreSQL, Kafka, Redis, Docker, Kubernetes

[Live](#) | [GitHub](#)

- Architected a distributed microservices platform with **10+ Spring Boot services** behind a **Spring Cloud Gateway**, decoupling claim intake, eligibility, and approval into independently deployable services.
- Engineered an asynchronous claims pipeline** using **Apache Kafka & Zookeeper**, eliminating synchronous HTTP bottlenecks and boosting end-to-end processing throughput by **40%**.
- Secured application access using **OAuth2** and **RBAC** for different user roles such as citizens, caseworkers, and administrators.

CollabMatrix - Collaboration Platform | Spring Boot, Kafka, Redis, WebSockets, MongoDB

[Live](#) | [GitHub](#) | [Demo](#)

- Built a real-time collaboration platform (like Jira + Notion + Slack combined) where multiple users can edit documents, manage tasks, and chat with instant updates, using WebSockets to keep everyone in sync.
- Used **Optimistic Locking** to handle concurrent task edits safely and **Rate Limiting** to protect the backend from excessive traffic.
- Deployed the whole system (9 services) using **Docker**, with monitoring set up through **Prometheus** and **Grafana**, and secured user login with **JWT-based authentication**.

EDUCATION

Master of Computer Application (MCA) | CGPA: 8.25 / 10

Aug 2022 – May 2024

Zeal Institute of Business Administration, Computer Application & Research

Pune, India

- Relevant Coursework:** Data Structures & Algorithms, Object-Oriented Programming, DBMS, Computer Networks
