

ARBAZ SAYYAD

Backend Software Engineer | Java | Spring Boot | Distributed Systems

☎ +91 9834239709 | 📍 Pune, India | ✉ arbazsayyad.dev@gmail.com | 🌐 [in/arbaz-sayyad](https://in.linkedin.com/in/arbaz-sayyad) | 📱 [/arbaz4sayyad](https://github.com/arbaz4sayyad) 📁 Portfolio

PROFESSIONAL SUMMARY

Backend Software Engineer with **2.5+ years of experience** building scalable, cloud-native microservices and distributed systems using **Java, Spring Boot, Kafka**, and **Redis**. Experienced in designing event-driven architectures, developing secure REST APIs, and optimizing performance for high-throughput backend services. Open-source contributor to **Spring Kafka** and **Spring Framework**, with a strong foundation in backend engineering, system design, and algorithms, having solved **400+ DSA problems** on LeetCode and HackerRank.

TECHNICAL SKILLS

Programming Languages: Java (17/21), SQL, JavaScript

Backend: Spring Boot, Microservices, Spring MVC, Spring Cloud, Spring WebFlux, Spring Security, Hibernate/JPA, REST APIs, gRPC

Distributed Systems & Messaging: Apache Kafka, Event-Driven Architecture, DLQ, Retry Mechanisms, Resilience4j, Fault Tolerance

Databases & Caching: PostgreSQL, MySQL, MongoDB, Redis

Cloud & DevOps: AWS (EC2, S3, RDS), Docker, Kubernetes, Jenkins, CI/CD, Maven

Observability & Security: Prometheus, Grafana, ELK Stack, OAuth2, JWT, RBAC

Engineering Practices: Data Structures & Algorithms, Low-Level Design, System Design, TDD, Agile/Scrum, Code Reviews, Git

PROFESSIONAL EXPERIENCE

Software Engineer – Backend

Jan 2024 – Present

AJ TechSoft

Pune, India

- Designed and implemented backend services using **Java, Spring Boot**, and **PostgreSQL/MySQL** for business-critical workflows.
- Built asynchronous event-driven workflows using **Apache Kafka**, implementing retry mechanisms and **DLQ** handling that reduced manual failure recovery efforts by approximately **60%**.
- Introduced **Redis** caching for frequently accessed data, reducing database reads and improving API response times by nearly **35%**.
- Optimized database performance through composite indexing, query tuning, and resolving **N+1 query issues** in **JPA**, reducing average query execution time by **45%**.
- Developed secure REST APIs using **Spring Security, JWT Authentication, OAuth2**, and **RBAC** to enforce controlled access.
- Developed unit and integration tests using **JUnit** and **Mockito**, achieving over **80% test coverage** for critical business workflows.
- Participated in code reviews, debugging, and production issue resolution to maintain application reliability and engineering quality.

OPEN SOURCE CONTRIBUTIONS

Spring Kafka | *Java, Apache Kafka, Distributed Systems*

- Contributed fail-fast validation support for **@RetryableTopic** in Spring Kafka to catch consumer configuration issues earlier, preventing runtime failures and improving developer experience for thousands of framework users. [[PR #4397](#)]

Spring Framework | *Java, WebFlux, Spring MVC*

- Extended **ModelAttributeMethodArgumentResolver** to support custom validation in **Spring WebFlux**, improving framework extensibility and aligning reactive validation behaviour with established Spring MVC patterns. [[PR #36697](#)]

PROJECTS

CollabMatrix - Collaboration Platform | *Spring Boot, Kafka, Redis, WebSockets, MongoDB, Docker* [[Demo](#)] [[GitHub](#)]

- Built a real-time collaboration platform using **WebSockets** to support instant updates across connected users.
- Implemented notification workflows using **Kafka** and **Redis** to process events asynchronously and prevent duplicate notifications.
- Implemented **Optimistic Locking & Rate Limiting** to handle concurrent updates & protect backend services from excessive traffic.

Insurance Claims Eligibility & Processing System | *Spring Boot, Kafka, Redis, MySQL, Docker, Kubernetes* [[GitHub](#)]

- Built a claims processing system where claim submission, validation, and approval run independently using **Kafka**.
- Implemented **Retry** and **DLQ** handling to ensure failed claim events could be processed again instead of being lost.
- Secured application access using **OAuth2** and **RBAC** for different user roles such as citizens, caseworkers, and administrators.

AI Meeting Notes | *Java, Spring Boot, React, JavaScript, PostgreSQL, Kafka, Redis, Gemini API, LLM* [[Demo](#)] [[GitHub](#)]

- Built an AI meeting assistant that generates meeting summaries and action items using **event-driven** asynchronous workflows.
- Designed **retry scheduling** and failed-job recovery workflows to prevent silent processing failures during AI tasks.
- Integrated the **Gemini API** and **Redis** to support automated summarization and improve request handling performance.

EDUCATION

Master of Computer Application (MCA) | **CGPA:** 8.25 / 10

Aug 2022 – May 2024

Zeal Institute of Business Administration, Computer Application & Research

Pune, India

- Relevant Coursework:** Data Structures & Algorithms, Object-Oriented Programming, DBMS, Computer Networks

CERTIFICATIONS & AWARDS

- Agile Project Management — Atlassian [[Certificate](#)]
- Java, SQL (Basic-Advanced), JavaScript & Problem Solving** — HackerRank [[Certificate](#)]
- Published **2 research papers** as lead author (IJNRD): [E-Commerce](#) & [Cyber-Crime Awareness](#)
